*The LRV (Light Reflectance Value) noted represents a percentage of the light energy, in the visible spectrum, that is reflected by the surface being measured. This value is defined in ASTM C609 as the Y value as measured in an XYZ/Yxy color space.

*The SRI (Solar Reflectance Index), as defined by ASTM E1980 using 12 W/m²K values incorporates reflectivity, or how well a material reflects back rather than absorbing radiant energy, and emissivity or how well a material radiates heat that was absorbed back into the environment.

The values noted on this card are typical values for these colors. Lot to lot variation will slightly affect the LRV and SRI values. Colors shown are as close to actual colors as allowed by the printing process.
